

[Google Native Client Security Hacking Contest Win \\$8,192 USD!](#)

## Security of Native Client

- \* Data integrity
  - \* Native Client's sandbox works by validating the untrusted code (the compiled Native Client module) before running it
- \* No support for process creation / subprocesses
  - \* You can call pthread
- \* No support for raw TCP/UDP sockets (websockets for TCP and peer connect for UDP)
- \* No unsafe instructions
  - \* inline assembly must be compatible with the Native Client validator (could use nval utility to check)

<http://code.google.com/p/nativeclient/issues/list>
